Art Unit: 1625

The Status of Claims:

Claims 1-10 are pending.

Claims 1-3 and 5-10 have been rejected.

Claim 4 is allowable.

DETAILED ACTION

1. Claims 1-10 are under consideration in this Office Action.

Priority

2. It is noted that this application is a 371 of PCT/GB03/02591 (06/17/2003), which has foreign priority documents, Sweden 0201935-2 filed on 06/20/2002.

Drawings

3. None.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 5-7, and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter

the invention.

which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use

Page 3

In the claim 1, the term "prodrug" is recited. However, the specification has not described how any prodrug is converted into its active form in the body under any circumstances. This description is essential to the claimed invention because it allows to distinguish identifying characteristics sufficient show that the applicant was in possession of the claimed invention, and the claim ,as a whole, may not be adequately described where the invention is described solely in terms of a process of its conversion coupled with its function and there is no described or art-recognized correlation or relationship between the structure of the invention and its functional language. For example, the specification merely mentions that the term "prodrug" refers to any compound which, upon administration to a host, is converted or metabolized to an active compound. Furthermore, Medical dictionary defines the term as a class of drugs, initially in active form, that are converted into active form in the body by normal metabolic processes. There are no examples for the class of prodrugs applicable to the claimed invention; not to mention, how the prodrugs are converted or metabolized to the active compound of the present invention.

Therefore, the specification has failed to describe the subject matter in the claims as to the relationship between the prodrugs and their final active claimed compounds during the preparation process. Therefore, an appropriate correction is required.

Art Unit: 1625

In claim 6, the phrase "a method of treating and preventing insulin resistance" is recited. However, the specification does not describe how to prevent diabetes in general and furthermore, there are two different kinds diabetes: type 1 and type 2. Diabetes mellitus type 1 is related to a generic defect (an autoimmune disease) ,whereas Diabetes mellitus type 2 is linked to a life style (obesity) led to insulin resistance. Diabetes mellitus type 1 needs on-going insulin injections; therefore, the only solution so far is the transplant of the pancreas. From this information, there are no showings of any evidence for "preventing diabetes type 1 and type 2" at the same time. Furthermore, the contemporary knowledge of the art does not teach "how to prevent "for alleged Diabetes. If we could prevent all the possible permutations and combinations of the above, nobody would be sick. In addition, more than routine experimentation is involved. See In re Armbruster 185 USPQ 204 (CCPA 1985) and Angstadt et al., 190 USPQ 152 (CCPA 1990). Therefore, the specification has failed to support enablement for the method for treating and/or preventing insulin resistance. Therefore, an appropriate correction is required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7–8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 provides for the use of a compound, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process

Art Unit: 1625

applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 7 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim 8 recites the limitation "R¹, R²,R³, W and n are as previously defined" in line 4. There is insufficient antecedent basis for this limitation in the claim.

In claim 8, the phrase" R¹, R²,R³, W and n are as previously defined" is recited. This is vague and indefinite because those variables are undefined.

Regarding claim 10, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Taylor Victor Oh whose telephone number is 571-272-0689. The examiner can normally be reached on 8:30-5:00.

Art Unit: 1625

If attempts to reach the examiner by telephone are unsuccessful, the examiner's
